

Release Notes for the QNX Neutrino 6.4.0 BSP for Atmel AT91SAM9261-EK Board#

System requirements#

Target system#

- QNX Neutrino RTOS 6.4.0
- Board: Atmel at91sam9261-EK Evaluation Board
- Data-Flash: AT45DCB008D (8 MB) CARD
- SDRAM: 16-bit Micron MT48LC16M16A2 (64 MB) SDRAM
- NAND Flash: Samsung K9F2G08U0A (256 MB) NAND Flash

Host development system#

- QNX Momentics 6.4.0, one of the following host systems:
 - QNX Neutrino 6.4.0
 - Microsoft Windows Vista, XP SP2 or SP3, 2000 SP4
 - Linux Red Hat 8 or 9, Linux Red Hat Enterprise Workstation 3 or 4, Red Hat Fedora Core 3 or 4, or SUSE 10
- Terminal emulation program (Qtalk, Momentics IDE Terminal, tip, HyperTerminal, etc.)
- Windows Machine required SAM-BA application to download the image on Data-Flash.
- RS-232 serial port
- NULL-modem serial cable
- USB cable to connect board with windows Machine

Getting Started#

Step 1: Connect your hardware#

Connect the DEBUG port of the AT91SAM9261 board to the first serial port of your windows machine. Install the SAM-BA application provided by Atmel. Connect the board with Windows Machine using USB Cable.

Step 2: Build the BSP#

You can build an OS image from the source code or the binary components contained in a BSP package. For instructions about building an OS image, please refer to the chapter Working with a BSP in the Building Embedded Systems manual. After Building the BSP three bin files will be created in images directory.

*ifs-at91sam9261.bin

*ipl-at91sam9261.bin

*ipl-ifs-at91sam9261.bin

mkflashimage script creates a combined IPL/IFS image as ipl-ifs-at91sam9261.bin

The mkflashimage script:

```
#!/bin/sh
```

```
# script to build a binary IPL and boot image for ATMEL AT91SAM9261 Evaluation Kit board.
```

```
# NOTE the image (ipl-ifs-at91sam9261.bin) must be built as binary, i.e. [virtual=armle,binary] in the buildfile
```

```
set -v
```

```
# Convert IPL into BINARY format
```

```
${QNX_HOST}/usr/bin/ntoarm-objcopy --input-format=elf32-littlearm --output-format=binary -R.data ../install/armle/boot/sys/
```

```
# Pad BINARY IPL
mkrec -s16k -ffull -r ipl-tmp-at91sam9261.bin > ipl-at91sam9261.bin

# Combine the BINARY IPL with the BINARY OS Image
cat ./ipl-at91sam9261.bin ./ifs-at91sam9261.bin > ipl-ifs-at91sam9261.bin

# Cleaning up temporary files
rm -f *tmp*
```

Step 3A: Download the Bootable IFS image.#

The Boot Program integrates different programs that manage download and/or upload into the different memories of the product. First, it initializes the Debug Unit serial port (DBGU) and the USB High Speed Device Port.

- Then NAND Flash Boot program is executed. The NAND Flash Boot program searches for a valid application in the NAND Flash memory. If a valid application is found, this application is loaded into internal SRAM and executed by branching at address 0x0000_0000 after remap.
- If no NAND Flash Boot program is found, the Data-Flash Boot program is then executed. It looks for a sequence of seven valid ARM exception vectors in a Data-Flash connected to the SPI. All these vectors must be B-branch or LDR load register instructions except for the sixth vector. This vector is used to store the size of the image to download. If a valid sequence is found, code is downloaded into the internal SRAM. This is followed by a remap and a jump to the first address of the SRAM. If no valid ARM vector sequence is found, SAM-BA Boot is then executed. It waits for transactions either on the USB device, or on the DBGU serial port.

Install and setup SAM-BA#

1. Install "AT91-ISP v1.12.exe" .
2. Install "ActiveTcl8.5.5.0.287690-win32-ix86-threaded.exe" i.e.TCL environment which is used by SAM-BA (any other TCL environment can also be used) .
3. Connect serial cable with windows machine, and use any serial port application such as teraterm or hyperterminal, and attach it with COM device, with baud rate set as 115200. Remove jumper J21 .
4. Restart the board, hyperterminal will be showing following message .

```
RomBOOT
>
```

5. Connect usb cable with windows machine, It will prompt with a new usb hardware found message, and will try to install the corresponding driver .
6. Check device has enumerated properly by looking into device manager. Enable jumper J21 .
7. Start SAM-BA 2.6 with \usb\ARM0 as connection.

Loading the IFS image using SAM-BA#

- Select the Data-Flash AT45DB/DCB tab in SAM-BA Application. Execute the Enable Data-flash on CS0 script.
- Select the ipl-ifs-at91sam9261.bin file to be sent to the target, and then press Send File. Depending on the size of your file, it will take a few seconds up to a minute.

SAM-BA 2.6 - AT91SAM9261-EK

DataFlash AT45DB/DCB NandFlash SDRAM SRAM

Download / Upload File

Send File Name : Send File
 Receive File Name : Receive File
 Address : Size (For Receive File) : byte(s) Compare sent file with

Scripts

Execute

```

-I- Switch to the correct PCS of SPI0 Mode Register (Fixed Peripheral Selected)
-I- Chip Select 0 Selected
-I- Enable the SPI0
-I- Wait for dataflash ready (bit7 of the status register)
-I- DataFlash AT45DB642
-I- End of Select DataFlash
(AT91-ISP v1.10) 26 % send_file {DataFlash AT45DB/DCB} "Y:/package/download_pckg/9261/images/ipl-ifs-at91sam9261.bin" 0x0
-I- Send File Y:/package/download_pckg/9261/images/ipl-ifs-at91sam9261.bin at address 0x0
-I- File size = 6548012 byte(s)
(AT91-ISP v1.10) 26 %
  
```

Now on your terminal you will see output as follows:

RomBOOT

>

QNX Neutrino Initial Program Loader for ATMEL AT91SAM9261-EK

Commands:

Press 'D' for serial download, using the 'sendnto' utility

Press 'F' to Boot an OS image from SPI/SERIAL flash

#
```

You can test the OS simply by executing any shell builtin command or any command residing within the OS image (e.g. ls).

Step 3B: Reprogram the IPL.<#>

In case if Board is new or IPL gets corrupted, We can reprogram IPL using SAM-BA application.

- Select the Data-Flash AT45DB/DCB tab in SAM-BA application window, . Execute the Enable Data-flash on CS0 script.
- Select the ipl-at91sam9261.bin file to be sent to the target, and then press Send File. It will take a few seconds up to a minute.
- Snapshot is as follows:

SAM-BA 2.6 - AT91SAM9261-EK

Summary of driver commands#

The driver command lines below are specific to the Atmel AT91SAM9261 board. See the online docs for each driver for additional command-line options and other details.

Note: Some of the following drivers are commented out in the default buildfile. To use the drivers in the target hardware, you'll need to uncomment them in your buildfile, rebuild the image, and load the image into the board.

Startup:#

Command:

startup-at91sam9261 -r 0x23dd0000,0x200000,1 -vvvvvvvv

Serial:<#>

Command:

```
devc-serdebug -e -F -S -b115200 -c50000000 0xffff200,1
```

Required binaries:

- devc-serdebug

MMC SD:<#>

Command:

```
devb-mmcsd-at91sam9xx mmcsd ioport=0xFFFA8000,irq=9
```

Required binaries and libraries:

- devb-mmcsd-at91sam9xx
- libcam.so
- cam-disk.so
- io-blk.so
- fs-dos.so
- fs-qnx4.so

SPI:<#>

Command:

```
spi-master -u0 -d at91sam9xx base=0xFFFC8000,irq=12,clock=50000000
```

```
spi-master -u1 -d at91sam9xx base=0xFFFC000,irq=13,clock=50000000
```

Required binaries:

- spi-master
- spi-at91sam9xx.so

ETFS NAND flash<#>

Command:

```
fs-etfs-at91sam9xx -D addr=0x40000000,board_id=at91sam9261-ek -m /fs/etfs
```

Required binaries:

- fs-etfs-at91sam9xx
- etfsctl

Note: For more information about these commands, see the Neutrino Utilities Reference.

Graphics<#>

Command:

```
Photon &  
waitfor /dev/photon  
io-display -dvid=0x0,did=0x0  
io-graphics  
pwm &  
pterm -x10 -y10 -h250 -w200 -t"QNX 6.4.0" -K 03 &  
devc-pty &
```

Required binaries:

- devg-at91sam9261.so
- libph.so
- libAp.so
- libphexlib.so
- libphrender.so
- libffb.so
- libdisputil.so
- libimg.so.1
- ttffcore.so
- PHFcore.so
- FCcore.so
- libFF-T2K.so
- libblkcache.so
- libFF-T2K-fm.so
- libFF-T2K-cache.so
- phfont.so
- libfontutils.so
- libfont.so

Required configuration files:

- /usr/photon/config/at91sam9261.conf=\${PWD}/../src/hardware/devg/at91sam9261/at91sam9261.conf
- /etc/system/config/display.conf=\${PWD}/../src/hardware/devg/at91sam9xx/display.conf

About graphics#

This driver currently supports the AT91SAM9261 integrated LCD controller . It was developed on the Atmel AT91SAM9261 Evaluation Board. This is the GF graphics driver is loaded by io-display.

LCD Displays#

- By default the driver sets up the Hitachi TX09D71VM1CCA TFT with the AT91SAM9261 reference board.

HW Format	QNX Format	Notes
24-bit	24-bit	QNX framework format is RGB888

The LCD controller for the AT91SAM9261 expects colors to be in the format of BGR. The QNX graphics framework specify the colorformat as RGB. The graphics driver is now providing the entry points for the SW rendering to be done in the correct format.The file fbaccess.c implements the s/w rendering functions for rgb888 format.

Reserving Memory / Memory Restrictions#

The Atmel AT91SMA9261 is a UMA system (Unified Memory Architecture). This means there is no dedicated video memory in the system. Surfaces displayed by the LCD controller, and rendered by the CPU, reside in system memory

- To ensure there is enough memory available for graphics, we recommend that memory be reserved at startup by using the -r option to startup.

For example to reserve 2 MB of memory:

```
startup-at91sam9261 -r 0x23dd0000,0x200000,1 -vvvvvvv
```

where 0x23dd0000 is the physical base address of memory, and 0x200000 is the size of memory reserved in bytes.

For a list of options available to the driver please see the at91sam9261.conf file.
