IDE 4.5.1#

IDE is an acronym which stands for Integrated Development Environment and a short form for the QNX Momentics IDE. The IDE is based on Eclipse and CDT (open source projects). It provides a Graphical User Interface for developing applications for the Neutrino Real Time Operating System (RTOS). The IDE runs on Windows and Linux hosts, uses cross-platform compilers for Neutrino, and supports "target machine" management with remote running and debugging of applications.

This is maintenance release for IDE 4.5.0, version number 4.5.1. You can experiment with this version of IDE after you install one of the IDE 4.5.1 integration builds. We welcome your suggestions for improvement.

- Check out Release Notes page to see what bugs were fixed compare to baseline.
- Use the IDE Forum for discussions about the IDE, and to post your questions, comments, and suggestions.
- Download one of the IDE integration builds or use update site https://www.qnx.com/account/updates/foundry27/ide/tau
    - Latest download: IDE 4.5.1 build 20081125

See Installation Instructions at IDE 4.5 Download page.
