

Installation notes for system process.<#>

1. Download a bundle from the [Latest Software Updates](#) page.

2. Compare the cksum result with the checksum posted on the Latest Software Updates page.

```
# cksum <app_name>.YYYYMMDD.tar.gz
```

3. Unpack the bundle:

```
# zcat <app_name>.YYYYMMDD.tar.gz | tar x
```

4. Backup the existing file.

If you wish to keep a copy of the existing utility, you'll need to save it to a safe location first, to prevent it from being overwritten during installation.

```
# cp -vc /bin/<app_name> /bin/<app_name>.`date +%y%m%d_%H%M%S`
```

5. Copy the updated application to the **/bin** directory:

```
# cp <app_name> /bin
```

Please note that some system utilities are placed in /usr/bin directory instead of /bin. Use correct path on steps 4 and 5.
